Whale or dolphin

If you see a dorsal fin, it's probably a whale or dolphin. Sharks are incredibly rare; if you think you see a shark, mark it as a whale or dolphin. The undersides of the tails contain individually identifiable markings, so please tell us if you can see the underside of the tail (and, if so, whether it belongs to a humpback). Click on the field guide to the right for more details about how to identify humpback whales from the shape of their tails.

Is the underside of the tail visible?

Yes No

If "YES," does the tail belong to a humpback whale?

Yes No
