Appendix 1: Newsletters to volunteers

Newsletter 1 (A): sent to existing Snapshots at Sea volunteers

Date: June 8, 2017

Subject: New Images on Snapshots at Sea

Hi everyone!

We've got exciting news for all of you Snapshots at Sea-ers out there. Not only have we posted a brand new batch of over 13,000 images, but we've added an alternative workflow design in case you want to change up how you classify!

Now when you visit <u>Snapshots at Sea</u>, you can choose from the original series of "yes/no" questions **or** you can use a "survey" design to go straight to the final answer.

All of the data contribute to the same final dataset -- all the humpback whale tails will be sent on to Whales as Individuals -- but now you get to choose how you interact with the images. So check it out - we're excited to see what you think!

Start helping out again right now at www.snapshotsatsea.org.

Thanks for your help!

Ted & the Snapshots at Sea Team

Newsletter 1 (B): sent to Seafloor Explorer volunteers

Date: June 8, 2017
Subject: New project!

Hi everyone!

Since Seafloor Explorer is out of data, we thought you might be interested in checking out one of our other ocean-based projects.

We've just added a load of new data to <u>Snapshots at Sea</u>, which asks for your help in identifying humpback whales from photos taken by tourists. There are two options for classifying the images - a standard "survey" style task where you can pinpoint the type of animal, and a "yes/no" style that runs the images through a series of yes/no questions. All of the data go to the same place, so choose whichever style you like the best!

All of the humpback whale tails get sent on to our other ocean project, Whales as Individuals (https://www.zooniverse.org/projects/tedcheese/whales-as-individuals), where you can help prepare the photos for individual recognition software. Humpback whale tails are all individual recognizable, but the machines need a bit of help from you before they can perform at their best.

Thanks for your help, and happy hunting!

Ali & the Snapshots at Sea Team

Newsletter 2: Sent to everyone who participated on Snapshots at Sea

Date: July 6, 2017

Subject: New images on Snapshots at Sea!

[GET FROM GRANT]

Newsletter 3: Sent to everyone who participated on Snapshots at Sea

Date: July 6, 2017

Subject: More to do on Snapshots at Sea!

Hi there.

We still need your help on <u>Snapshots at Sea!</u> You've plowed through all of the images on the Yes/No workflow, but there are still thousands of images still awaiting classifications via the Survey workflow.

Once all the images are finished, we'll be able to compare results from the two different workflows and see if there's any way to make the project even more efficient.

Start helping out again right now at www.snapshotsatsea.org.

Thanks for your help!

Ted & the Snapshots at Sea Team

Follow-up Survey: Sent to everyone who participated on Snapshots at Sea

Date: July 6, 2017

Subject:

Ali from Snapshots at Sea <no-reply@zooniverse.org>

Hi everyone,

Thank you all so much for your help classifying images on <u>Snapshots at Sea!</u> The whales you find will get individually identified and help researchers better understand humpback whale movements and population dynamics around the world.

At the <u>Zooniverse</u>, we are always trying to improve our projects - in terms of accuracy, efficiency, and engagement. We're especially interested in evaluating the "yes/no" approach vs. the more common "survey" approach to see how we might apply this "yes/no" approach more broadly across the Zooniverse.

If you have a few minutes, we'd love to hear a bit more about who you are and what you thought about the project. All the information you give us is completely optional, but we really appreciate anything you can tell us that will help us continue to make the Zooniverse better.

So, if you have a few minutes, please head over to this survey and let us know what you thought!

Snapshots at Sea: Survey 02/08/2017, 16:29

Snapshots at Sea: Survey

At Zooniverse, we are always trying to improve our projects - in terms of accuracy, efficiency, and engagement. We're especially interested in evaluating the "yes/no" approach vs. the more common "survey" approach to see how we might apply collaborative filtering more broadly across the Zooniverse.

If you have a few minutes, we'd love to hear a bit more about who you are and what you thought about the project. All the information you give us is completely optional, but we really appreciate anything you can tell us that will help us continue to make the Zooniverse better.

Animals Species Identification Those related to nature; snapshots at sea, snapshot serengeti, penguin watch, etc. Cat Cam Panthera I enjoy the most. Both in Africa and Indo China. There's so much diversity in species and they use very good quality camera's.	Survey Workflow Both Both Both	Survey Workflow Survey Workflow Both Both Survey Workflow Both	Still able to view all the images of all the wildlife which is great, but as the final objective is to identify whale flukes it is a little frustrating to repeatedly be seeing images that aren't even whales Perhaps if you decide to continue with the yes/no scenario a slightly more direct approach might be a good compromise. eg - is there a whale/dolphin in this image for the starting question would eliminate a lot of the images in the first round. or use the animal type survey question to sort the birds/ seals&otters/ no animals/ fish from the whales then progress to yes no answers Survey The yes/no was quick and easy, but the survey felt more involved and fun The yes/no workflow is better when I'm tired and don't want anything even remotely complicated, the survey takes a bit more focus. Both work, but the situations I used them differed. The Yes/no workflow is so ridiculous easy that it becomes very dull after a minute. Of course, one can click very quick through the images but it doesn't give a challenge. The survey asks more attention from me, because I have to do different tasks to mark the whales tail etc. Here also the diversity in activity gives me more challenge and keeps it more interesting. The yes/no, I could go thru quickly when my time was limited. The survey liked for total opposite reasons. I would enjoy viewing the photo learning more about the geography as well as the mammal. Marking, animal/population tracking Both Both

Yes/No workflow was very fast so I enjoyed that, a very good way to quickly go through all the images and narrow down the selection. The survey workflow was slower but just as easy to understand.

Computer
